DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 23,32,34,36 and 39 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1,3, (4 and 33), 1,1 respectively of U.S. Patent No. 6096457. Although the conflicting claims are not identical, they are not patentably distinct from each other because The 6096457 patent obviously has a means for optimizing "off-axis illumination parameters" to "compensate for the effects of the phase error" and that means corresponds to "a restrictor" as claimed in the instant application .

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 23-62 are rejected under 35 U.S.C. 102(e) as being anticipated by Shiraishi (US 6211944).

Re clms 23-62: Shiraishi discloses a system (Fig 1), comprising: an illuminator (1); a phase shifting mask (13a); and a restrictor (58 controls 17) adapted for adjusting illumination parameters to compensate for a phase shift error (Col 11, lines 33-45) in the phase shifting mask , a restrictor providing off-axis illumination is disclosed (Col 3 lines 3-12) and restrictor optimizes printing of the alternating phase shifting mask using empirical data (Col 12 line 10) taken from one or more simulations of an image on the alternating phase shifting mask.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jewell et al 4947413 and Yang 6277526.
